CAREER OBJECTIVE

Aspiring Agentic AI Developer pursuing B.Tech, with hands-on experience in building autonomous AI systems, LLM integration, and AI-driven workflow automation. Passionate about designing intelligent agents capable of decision-making and task automation, and committed to delivering innovative solutions while continuously growing with emerging AI technologies.

EDUCATION

Dr. N.G.P. Institute of Technology	2023 – 2027
B.Tech – Artificial Intelligence and Data Science	
• CGPA: 8.31	
Government Higher Secondary School, Kurumandur	2021 – 2023
Higher Secondary	
• 80%	

PROJECTS

Neuro AI – Intelligent Conversational Assistant	2024
Engineered a context-aware conversational agent powered by the Gemini API, capable of maintaining multi-turn dialogue and handling ambiguous queries. Implemented prompt-chaining strategies to improve response relevance, reducing follow-up clarification requests. Demonstrated the practical integration of large language models into a deployable web interface.	
Animal Disease Prediction System	2024
Developed and compared four supervised classification models (Random Forest, SVM, KNN, Logistic Regression) on a curated veterinary health dataset. Achieved 91% accuracy with the Random Forest model after feature engineering and hyperparameter tuning. The system enables early disease detection, supporting timely veterinary intervention.	
Mental Health Monitoring System	2025
Built an end-to-end AI application leveraging NLP and multi-class sentiment analysis to assess user emotional states from free-text input. Designed a mood-trend dashboard that tracks patterns over time and surfaces early-warning indicators, enabling proactive mental health awareness. Evaluated three transformer-based models and selected the highest-accuracy classifier for production use.	
Intelligent API Orchestrator – AI-Powered Workflow Automation Platform	2026
Developed an AI-powered API orchestration platform that automatically understands user requests, selects relevant APIs, and creates dynamic workflow pipelines. Implemented real-time pipeline visualization, workflow automation, execution monitoring, and cross-session workflow memory using React, FastAPI, LangGraph, and SQLite.	

INTERNSHIPS

ST Microelectronics – DigiToad Technologies (Offline, 15 Days)	2025
• Gained hands-on experience working with basic sensors and interfacing them with microcontroller systems. • Developed a foundational understanding of embedded systems and microcontroller architectures. • Worked with STM32 Cube IDE for code development, debugging, and deployment. • Explored edge AI concepts using Nano Edge AI Studio for intelligent sensor data analysis.	

AREA OF INTEREST

- Agentic AI Developer
- AI Workflow & Automation Engineer
- AI Engineer
- Prompt Engineer & AI Orchestration Developer

TECHNICAL QUALIFICATIONS

Programming Languages: Python, JavaScript, Java

AI / ML Domain: Machine Learning, Deep Learning, NLP, Generative AI, LLM Integration, Agentic AI, Prompt Engineering, AI Orchestration, Autonomous Agent Design, Workflow Automation.

APIs & Frameworks: Gemini API, OpenAI API, OpenRouter API, REST APIs, Hugging Face, LangChain, AutoGen, n8n (Automation Tools)

CERTIFICATIONS

- NPTEL – Internet of Things (IoT) | Design and Implementation of Human-Computer Interface
- ICT Academy Learnathon 2024 – Artificial Intelligence & Data Analytics
- Power BI Data Visualization – Office Master
- Completed AI Fluency: Framework & Foundations by Anthropic. Gained practical knowledge of AI fundamentals, workflows, and responsible AI usage

CO-CURRICULAR / HACKATHONS

- Smart India Hackathon 2024 – Reached submission stage.
- MIT Hackathon – Delivered a working prototype under a 8-hour constraint; strengthened rapid prototyping and cross-functional teamwork skills.
- PSG iTech Pitch Fest – Presented an AI startup concept to an expert panel; developed pitching, business modelling, and public speaking skills.
- Intra-Institution Hackathon, Dr. N.G.P. Institute of Technology – Collaborated in a Team-member team to build and demo an innovative AI solution within the allotted time.
- National-Level 24-Hour Hackathon – Developed an Intelligent API Orchestrator using Agentic AI; implemented dynamic multi-step workflow automation and autonomous API decision-making.

WORKSHOPS

- 2-Day Agentic AI Workshop – Hands-on sessions covering autonomous agent design, workflow automation, and real-world AI deployment patterns.

VOLUNTEER ACTIVITIES

- Class Representative, Dept. of AI & DS – Primary liaison between faculty and 60+ peers; coordinated schedules, communicated departmental updates, and resolved academic concerns.
- Student Member, Board of Studies – Participated in curriculum review meetings, advocating for industry-aligned course updates and practical AI/ML elective inclusions.

PERSONAL DETAILS

Languages Known: Tamil, English

Date of Birth: 08 September 2005

Key Strengths: Analytical thinking, problem-solving, team leadership, effective communication, adaptability, time management, innovation-driven approach
